

## Understanding Neuroscience Feedback

*Course led by Amanda Hubball, Specialist Leader of Education (SLE) at Alfreton Nursery School*

*Course aims - 3 hour course focused on the latest developments in Neuroscience and the origins of children's behaviour and implications for teaching practice. Practitioners looked at how attachment and trauma related issues could impact on a child's development, and were given an opportunity to explore and understand children's complex responses to busy classrooms.*

*Did the course meet all your expectations?*

- Yes
- Above and beyond – confirmed a lot but learnt even more
- Yes and more, I have learnt so much, Amanda explains things very well
- Yes, exceeded it
- Yes it was excellent. Very informative and thought provoking.
- Brilliant, reminded me there is so much children go through.

*What did you enjoy most about the course?*

- Enjoyed it all, thank you
- Simply everything – thank you Amanda, brilliantly delivered.
- All of it. It has certainly changed my views of how things happen and what I can do to be a great practitioner.
- Learning about what part of the brain does; which results to different behaviour
- Extremely informative, lots to think about & feedback
- Learning that actually you do make a difference and provide the safe haven for the children.
- Information on our brain. Reminded children are children, all unique – day to day lives – steps just getting to school, before the day begins.
